INFLUENT, EFFLUENT, AND BIOSOLIDS ANALYSIS

In accordance with the Monitoring and Reporting Program, California Board Order No. R6V-2013-0038, VVWRA collected samples of treatment plant influent and effluent discharged to both the Mojave River and to the percolation ponds. Samples were analyzed in-house or by E.S. Babcock & Sons, Inc., Riverside, California. The analytical results for 2019 are summarized in the "VVWRA 2019 Annual Discharge Monitoring Report", submitted under separate cover.

Effluent concentrations for inorganics, metals, organics, BOD, TSS, Nitrogen, MBAS, pH, dissolved oxygen, and residual chlorine were in compliance as related to industrial discharges within VVWRA's Waste Discharge Requirements (Order No. R6V-2013-0038).

Pathogen reduction is monitored by testing for Fecal Coliform, Salmonella, Helminth Ova, and Enteric Virus. Each drying bed is monitored by sampling analysis, confirmed by receipt acceptable results or resampling before transferring to a storage pad. This ensures biosolids have met 40 CFR 503 regulations before giving clearance to transfer to the facility storage pad where biosolids are clear for land application. Biosolids that do not meet 40 CFR 503 regulations are stored in drying bed #4 where resampling is performed to give final clearance for disposal once regulations are met.

Sampling and testing for 40 CFR 503 Table B pollutant concentrations were performed at each drying bed before relocating to the disposal staging area. Sampling and testing for biosolids moisture content are performed once every 30 days as an internal check before transferring biosolids to the disposal staging area. Once lab results are confirmed to have met 40 CFR 503 regulations biosolids are then moved to storage pad for disposal.

Biosolids monitoring results for the reporting period of the year 2019 are summarized in the "VVWRA 2019 Annual Biosolids Monitoring Report" as required by 40 CFR Part 503, submitted under separate cover.

UPSET, INTERFERENCE, AND PASS THROUGH INCIDENTS

No upset, interference, or pass through incidents were caused by industrial users during 2019.

This Repairs and Replacement (R&R) Fund has been a part of Operations and Maintenance (O&M) Fund in the past-year budget presentations. For FY 2018 through FY 2020, we have presented the R&R Fund separately, as we strongly believe that such presentation better describes the normal operations and maintenance results without skewing them with periodical high repairs and replacement costs. In order to sustain the R&R projects, a transfer from the O&M fund is needed.

VVWRA has completed the construction of sub-regional water reclamation plants (sub-regionals) in the City of Hesperia and the Town of Apple Valley during FY 2018. The construction costs of these plants approximate \$40 million each. These projects are funded by Clean Water State Revolving Fund (SRF) loans from the California State Water Resources Control Board (SWRCB) and the remaining by Title 16 Grant from the Federal Bureau of Reclamation, by Proposition One Water Quality, Supply, and Infrastructure Improvement Act of 2014 and Proposition 84 Round Two Integrated Regional Water Management Implementation Grant from the California State Department of Water Resources, and by Propositions 13 and 50 under Water Recycling Grant Program from the SWRCB. The SRF loan repayments for the sub-regionals would affect FY 2020 operation costs as the loan repayment process began during FY 2019. As the loan agreements require, VVWRA has set up a loan reserve to cover one-year payment of principal and interest for the sub-regional projects. In order to be in compliance, the member agencies have searched for the long-term solution how to repay the SRF loans for these projects. To adjust for the loss of the flow revenue that was projected in the 2014 financial plan,

the member agencies' consensus is to have a proper rate adjustment to either operate these two plants or pay back the loans as they become due. The FY 2020 budget is currently based on operating only one of these plants as recommended by the Finance Committee. Until the agency can change both the user charge rate and the connection fee rate, it will most definitely face the challenge during FY 2020 of potentially not having enough reserves as required for the subregionals loans.

The long-range financial impact of these capital projects on the O&M and Capital budget is significant, as the loan repayment of principal and interest will increase from \$3.8 million in FY 2018 to \$5.1 million in FY 2020. Under current conditions, in order to maintain the required debt payment reserve level and debt coverage ratio, VVWRA will most likely have to increase the user charge rate connection fee rate. VVWRA is currently working with external financial consultants on a new financial plan that will ensure the Authority's compliance with the debt reserve requirement in future years.
